

RULES AND GUIDELINES

Are you ready to embark on an exciting photographic journey through the environment? Join us in EcoLens, where participants will explore and capture captivating photographs of their assigned areas within their school or community.

Here's how it works:

1. Each participant will be assigned a specific area to explore, observe, and photograph. Your assigned area may focus on plants, animals, landscapes, or even the impact of pollution. Let your camera be your lens to the wonders of nature!
2. Embrace your role as a keen observer and photographer. Take multiple photographs to capture a range of observations and showcase the diversity and beauty of your assigned area.
3. Once you have collected your photographs, it's time to present and discuss your findings. Share your insights, analyze the images, and highlight the significance of what you have captured. What can we learn from your photographs about the environment?
4. The competition will be judged based on the quality and relevance of your photographs, as well as the depth of analysis and observations presented during the discussion. Showcasing your artistic skills and your ability to convey meaningful messages through your photographs will be key.

Join us in EcoLens, and let your photographs become a powerful medium to capture nature's wonders and inspire others to appreciate and protect our precious environment.
